The present invention relates to human sel-10. The sel-10 proteins of the invention are useful for raising monoclonal or polyclonal antibodies useful in diagnostic assays for detecting sel-10 polypeptide expression. The sel-10 polypeptides are also useful as drug targets for decreasing antibody levels in the treatment of Alzheimer's disease. It is also useful for identifying agents capable of altering the production level of Abeta. The polynucleotides are useful for developing assays for identifying agents capable of interfering with the biological pathways that lead to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human sel-10 polypeptides and their encoding polynucleotides, useful for raising antibodies for detecting sel-10 polypeptide expression and as drug targets in the treatment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    50 TCLEELLGIDPSFEQFEAPLFSGLAKTLFFSVQTKAVNKQLDENISLFLIHLSPYFLLKP 109

This sequence is specifically a human hippocumpal set 10 protein. The polypoptides can be used to after presentlin function. Compounds which include either the expression of the architect the human set 10 polypoptides may reverse the effects of mutations to presentline! (PS-1) of 185-2, and therefore may be useful for the presention of treatment.

Proteins homologous to heat shock proteins from Trypanosoma cruzi - used
                                                                                                                                                                                                                                                The present invention relates to human sel-10. The sel-10 proteins of the invention are useful for raising monoclonal or polyclonal antibodies useful in diagnostic assays for detecting sol-10 polypeptide expression. The sel-10 polypeptides are also useful as dust targets for decreasing antibody levels in the treatment of Alzheimer's disease. It is also useful for identifying agents capable of altering the production level of Alberta. The polymorfootides are useful to december a sasays for identifying automic of idea are useful and the biological pathways that lead to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in vaccines and diagnosis for species of eg Mycoplasma or Mycobacteria.
New human sel-10 polypeptides and their encoding polynucleotides, useful for raising antibodies for detecting sel-10 polypeptide expression and as drug targets in the treatment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           50 TGLEELLGIDPSPEQFEAPLFSQLAKTLEPSVQTKAVNKQIDFNISIFTIHISPYFIJKP 109
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fig. 2 provides an alignment of heat shork proteins from a variety of organisms: 1. M.hyopneumoniae (Mhyhsp70 - AAR03422);
2. Bacillus meqaterium (Bmehsp70 - AAR03423);
3. E. coli (GnaX - AAR03924);
4. T. cruzi (tc?0kd - AAR03925);

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the invention are useful for raising momestern; or polyclonal antibodies useful in diagnostic assays for detecting sel-10 polypeptides are also useful as drug polypeptide expression. The sel-10 polypeptides are also useful as drug targets for decreasing infloady levels in the treatment of Alzheimer's disease. It is also useful for identifying agents capable of altering the production level of Abeta. The polynucleotides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human sel-10 polypeptides and their encoding polynucleotides, useful for raising antibodies for detecting sel 10 polypeptide expression and as drug targets in the treatment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               50 IGLEFILGIDESFEGFEAFLESGIAKTLEFSVQTKAVNKQLDENISLPLIHLSPYFFILKP 109

                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                 this sequence represents a feman set to protein of the insention. This sequence is specifically a basan mammary set 10 protein. The polypeptides sequence is specifically a basan more from Compounds which inhibit either the expression on the activity of the haman set 10 polypeptides may reverse the effects of mutations to presenting (1984) or PS-2, and therefore may be useful to the presention of treatment of Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the present incention relates to buman set-10. The set-10 proteins of the invention are useful for raising monoclonal or polyclonal and thodies useful is discussed assays for detecting set-10 pertyportide expression. The set-10 polypertides are also useful as ding tracts to decreasing antibody tereis in the treatment of Alzheimer's disease. It is also useful for identifying agents capable of allering the production level of Abeta. The polymer-locatides are useful to developing assays for identifying agents capable of interfering with the proloutical pathways that lead to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New homen selent pelypeptides and their encoding polynucleotides, useful for raising antibolies for detecting selent polypeptide expression and as drug targets in the treatment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        50 TOLBELLOTOPSFEQFEAFLESQUAKTLERSVOTKAVNKQLDENISLFLIHLSPYFILKP 109

The present invention relates to human sel-10. The sol-10 proteins of the invention are useful for raisina monoclonal or polyclonal antibodies useful in diagnostic assays for detecting sel-10 polypeptide expression. The sel-30 polypeptide oxpression and sel-10 polypeptide expression and sel-10 polypeptides for decreasing antibody levels in the treatment of Alzheimer's disease. It is also useful for identifying agents capable of Alzheimer's altering the production level of Abero. The polymerleadides are useful for developing assays for identifying agents capable of interfering with the biological pathways that lead to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                      New human sel-10 polypeptides and their encoding polynucleotides, useful for raising antibodies for detecting sel-19 polypeptide expression and as drug targets in the treatment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           50 TGLEELLGIDESPEQFEAPLFSOLAKTI EPSVOTKAVNKQIDPNISLFI I HI SPYFILKP 109

sequence is specifically a human hippocampal sel 10 protein. The polypeptides can be used to alter presentlin function. Compounds which inhibit either the expression of the activity of the human sel.10 polypeptides may reverse the effects of matations to presentlin. (FS 1) or PS-2, and therefore may be useful for the prevention of treatment of the prevention of th

this sequence represents a human selet0 protein of the invention. This sequence is specifically a human hippocampal seleto protein. The projectives can be used to after presentlin function. Compounds which inhibit either the expression or the evitting of the buman seleto polypoptides may reverse be effects of indications to presentline! (PS-1) or PC 2, in their of reay be useful for the precention of the action.
the invention are useful for raished monocional or polyclonal in the discussion of the assays for defecting select passays by depending select passays to describe expression. The select problems are also useful as dranges for decreasing at the edge levels in the treatment of Alikelmer's discusse. It is also useful for identifying agents capable of alterior the production level of Aberta. The polymerbotides are useful for developing assays for identifying agents capable of interfering with the biological pathways that lead to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Set Us: busin: presentlin: Alzheimer's disease: PS-1; PS-2; hippocampus;

The prosent invention relates to human sel-10. The sel by proteins of the invention are useful for idising monechonal or pelyclonal and manibodices useful in diagnostic assays for deterring sel 10 polypeptide expression. The sel 10 polypeptides are also useful as drag targets for decreasing antibody levels in the treatment of Alzheimer's disease. It is also useful for identifying agents capable of aftering the production level of Abeta. The polymurfeotides are iselvitor developing assays for identifying agents capable of interfine with the biological pathways that lead to Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human sel-10 polypeptides and their cheodina polynucleotides, useful for raising antibodies for detecting sel-10 polypeptide expression and as drug targets in the troutment of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    50 TOLEBLIGHPPSPEQPEAPLPSQLARTHPRSVQTMAVNPQLPWFSLPHHHSPYFTLKP TOS

  This sequence represents a human set 16 protein of the insention. This sequence is specifically a human manusary set 10 protein. The polypoptides can be used to after presentlin function. Compounds Which inhibit either the expression or the activity of the human set 10 polypoptides may reverse the effects of mitations to presentlin-1 (PS-1) or PS-2, and therefore may be useful for the prevention or treatment of Alzheimer's

Name the present increase and array targets in the treatment of Alzheimer's disease and antibodics useful for raising amperional or polyclonal control of the forest and array targets in the treatment of Alzheimer's disease.

The present increase decreasing antibody levels in the treatment of Alzheimer's disease. It is also useful for raising amperional or polyclonal or decreasing antibody levels in the treatment of Alzheimer's disease. It is also useful for facility and agents capable of a decreasing antibody levels in the treatment of Alzheimer's disease.

Consider the production terrol of America The polyclonal control of the bological pathways that lead to Alzheimer's disease.

Construction the production terrol of America The polyclonal control of the bological pathways that lead to Alzheimer's disease.

Construction the production terrol of America The polyclonal control of the bological pathways that lead to Alzheimer's disease.

Construction the production terrol of America The polyclonal control of a specific of decreasing antibody and the construction of the bological pathways that lead to Alzheimer's disease.

Construction of a grant of the bological pathways that lead to Alzheimer's disease.

All the bological pathways that lead to Alzheimer's disease.

American of a grant of Alzheimer's disease.

Managedon saptems.

American distribution telates to buman sello polypoptides and their encoding polymericalides.

This can be used to protein upported by which may then be used as an indicator of the proteins proteins as yestemic liquis crythematosms, antoimmune basmocytic anaemia, basedow's discusse and acquired immunodeliciency
         The present invention provides an antibody which reals with a classac product of vimentin but not with the intact protein. This can be used to detect appropriate, which may then be used as an indicate of the progression of the progression of discusses such as systemic impass crythematosus, autoimmane basembly the anaemia, Bussedow's discusse and acquired immunodaticioney
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vimentin: caspase cleavage site; apoptosis; antibody; Basedow's disease: systemic lupus erythematosus; autoimmune baemolytic anaemia; Albs: mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antibody reacting with a eleavage product of vimentin but not with the intact vimentin, useful for detecting apoptosis and the quantity of eleavage product of vimentin or as a reagent for immunohistochemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2.6.1 GMK-0.NY, ELEKTRISSPRVPEAALLIVIALAPKEKRINTIVILIRSTPFLAKIMEDEPTEL 2120

The genewas isolated from I cells from individuals allergic to cedar pollen using the differential display method. Pollinosis-associated gene 795 has homeology with the human vinentia gene. The invention also relates also constructs and homeology mignetism; perlinosis associated gene 795 to expression constructs and host neils comprised perlinosis gene 795; to expression nucleae actuals, pollinosis associated gene 775; to expression of pollinosis and probes.

Optimized associated gene 795 to makers and probes. On pollinosis-associated gene 795 to makers and probes. Adaptive the protein encoded by the gene, methods of detection of pollinosis-associated gene 795 nucleic acids, and a method of sucception daggers in integrals. The invariant additionally encompasses mathods gene 795 nucleic acids. The invariant of allergic disease by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       measuring the expression of pollinosis-associated gene 795 in pollen antigen-stimulated T-cells in the presence of a test compound relative to a control. Pollinosis-associated gene 795 is useful in the diagnosis of allegic diseases and in the screening of drug candidates for the treatment of such diseases. The present sequence represents a protectin encoded by human pollinosis associated gene 795.
                                                                                                                                                                                                                                                                                                           The invention relates to the human pollinosis associated gene 795 which
                                                                                                                                                        Pollinosis-associated gene 795 undergoing significantly low expression
in subjects with high crdar pollen-specific 19E levels, useful in
diagnosis of allergic diseases and screening drug candidates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Caps

                                                                                                                                                                                                                                                                                               AMT92331 37 were isolated in a modified yeast two hybrid system using NIKI protein as "bait". These are known sequences which are NIKI interacting proteins. The invention concerns purified complexes of a NIKI protein interacting protein; where the interacting protein is chesen from Trkh, protein pherythen are lapha, 173-3egislon, alpha-tropomyosin, wimenfun, point, first from 18-2, IP-3, NIKI (also referred to as Nek2) is a human homologue of the Aspergillus nidulans mitotic requision, NIMA kinase. NIKI is a serine/Altheonie-specific kinase and is thought to play a key role in cell-typic creats leading to the onser of mitosis. The complexes, their derivatives and NIKI or NIKI is a mitosis, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antibody reacting with a cleavage product of vimentin but not with
the intact vimentin, useful for detecting apoptosis and the grantity of
cleavage product of vimentin or as a reagent for immunohistochemical
New complex of a NiKl protein and a NiKl protein interacting protein, useful for treating cancer, hyperprollicrative disorder, negredogenerative disorder, cardiomyopathics viral infections and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequences, one are useful for treating or premeding a disease or disouder included abstract levels of the complex or protein. Such disouders include cancer, hyperproliferative disorders, can be not declared to disorders, candisoners, candisoners, candisoners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2090 ALAEKLKENYIVELPESIPFLAFLMEDPOFFVFHQOQKTIQQLETVLGEP 2139

Streptocassus pneumoniae Seud's protein.

02 0710184 (1118 00119)

AAWS SILS

```
endometrium during the hyperplasia, adenocarchnoms or proliferative phase of the endometrium. The presence and quantities of those proteins can be detected using 25 gel electrophoresis comparison of cell lysates. The proteins can be used as biochomical markers to detect the phase of the endometrian and can be measured in leady fluids, obviation the need for endometrial biopsies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; pollinosis-associated game 795; vimentin homologue;

```

The present sequence represents a protein from Streptococcus pneumoniae. The nuclear acid sequence enroding the Streptococcus purumoniae protein can be useful in zacrinos for inducing protective antibodies against. Streptococcus pneumoniae, for treatment or presention of intection can promoned, a fit is media or meninditis, protein assed on the nucleic acid are amplificate a acid. As also feel is a satisfied the streptococcus intection. By usual hyperidisation or amplificate a acid. As a series of their articles in structural meningers in a series of their articles. The protein are used to detect specific and the detect specific and the acid in meningers. As the detect series of their articles in structural meningers which hind the protein are used to detect act responsibility or particles and for passible temporal in the controller and for passible temporal in the first can be acid. The protein are used to form the controller and for the protein are used to the controller and for the controller and to a toxin). Vaccines are administrated every by input in the controller and toxin and the protein are controller.

Nucleic acid encoding antiquency peptide(s) from Streptoroperus preumoniae - or their epitope containing fragments, useful in protective or theighwaite vaccines, and for diagnosis

Such transgenic plants expressing an intracellular to lunal allack. Such transgenic plants expressing an partiacellular tails beta 1.3 glucanase gene within its tissues are predicted to exhibit improved resistance to pathogenic fundi. Such genes should be operably linked to promoters and terminators and optionally a gene encoding a selectable or screenable trait. Plants that overexpress the chitinase and glucanase genes exhibit a synergistic antifungal effect.
library following screening with a partial tobacco beta-1,3 glucanase clone. The amino acid sequence is identical to that of the tobacco extracellular beta-1,3 glucanase_PR36 (which has been partially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Fungus-resistant transgenic plants - containing genes encoding intracellular chitinase and beta 1,3 glucanase

The expression of the chitinase and beta-1,3-glucanase genes produces an antifundal effect. The transpenic plants are useful for improved plant resistance to pathogenic fungi. The recombinate polymorphasides and the process are useful for producing fungal resistant plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New transgenic plants expressing chitinase and qlucanase have improved resistance against pathogenic fundi, particularly against Alternaria alternata or Fusarium oxysporum f. sp. lycopersici
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

Polynucleotides, polypeptides, antibodies, agonists and autagonists from
the present invention may be used to treat immune disorders by activating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inflammation, cancers, cardiovascular disorders, monrological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, adontsts and antaqunists may be also be used in drug screens. AAC76449 to AAC78457 and AB842240 represents sequences used in the examplification of
AA37507 to AAC78448 encode the human cancer associated proteins given in AAB43898 to AAB44249. The proteins can have activities based on the issues and cells the acmes are expressed in Example of activities include: cytostatic; protein and include: cytostatic; protein and include: cytostatic; and anticometry immonomediator; antichtable activities antichtable and antichtable; antichtable antichtable antichtable activities antichtable and antichtable activities antichtable antichtabl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                or inhibiting the prolliferation, differentiation or modulisation of immune cells, to treat disorders of harmatopoietic cells, antoimmune disorders, allegic reactions, qualt versus host disease and organ rejection, modulate harmostatic or thrombolytic activity, modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5dp() ()
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence was deduced from a gene isolated from a N.tabarum cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Van Boekel JS;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to homan transcriptional requiator correctly (IMERG) separates. The analysis and an armist of the proteins of the invention are used to treat disorders associated with decreased or increased expression of activity of TXERG.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs of polyA! RNAs derived from 30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.

method for increasing the resistance of a core protein to proteolytic decreasing the congrises luxing or inserting onto or into the Core protein a stabilished poligieptide or formula [(6)ga)X(5)gb)Y(6)gb)Z(b) where sign, settly of general (8 sequential 6)g residues and X, Y, Z are between 1 of X, Y and Z reed not be identical from a repeat to a repeat. Alternatively a nucleic and encoding the stabilishing polypeptide can be finded onto or inserted fits a nucleic acid encoding a core protein. The finance of the profess and the invention are more resistant to destand for by protein. The proteins the profess can be used for freating actolimmure diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example and inclumnation. In particular, the core protein may be an isologic regular or project for the treatment of inclumnatory bowel disease, or a introoductuse profession which can activate nitro droas in encymneyfre that thereby veryor transfer pathological conditions. The pusion proteins can also be used in diagnostic methods such as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents the Arabidopsis agamous like (AGL) 4 protein. The AGL4 promoter is used to produce transgenic plants of the inventiou, which are characterized by suppressed flowering. The plants are transformed with a construct comprising a floral organ selective regulatory element (e.g. AGL4 promoter), operatively linked to a nucleotide sequence encoding a cytotoxic game product (which is inherituable by the progen). The plants may be grown for either human consumption of for use as a naw material in industry. When trees, they are particularly suitable for cultivation to provide which is a like advantageous resulprovers flowering in order to improve wood and lumbor yields suppression of flowering in order to improve wood and lumbor yields. Suppression of flowering may be desired to eliminate the production of allorgic pollon, or to prevent pollen dissemination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1828 NIYKGIEKNWKNHMGPFMSILGEHIGXMKKEELTSHQSQLTAFFLEALDFRAQHSENDLE 1887

```
This represents a haman (IEEE/MIAPLHEEE (CI) polypeptide that is involved in mitosis and cell cycle promoters for ell cycle specific recommisses and selects IATA-less core promoters for cell cycle specific denses. The 'I protein plays a role in establishing gene expression patterns necessary transfering in mitogin through the cell cycle progression through necessary transfering found regulator of cell cycle progression through a 22M. The product is on the ease for a role in the necessary transfering for the ease for a role in mitosis of cell cycle profusesion and treating disorders associated with alterations in mitosis of cell cycle profusesion, becreased CI gene expression can be used to rest cycle profusesion, becreased CI gene expression can be used to real cycle profusesion and profusesion because the configuration of the cycle profusesion has been dependent on a stable by used to identify genes whose expression has dependent on a SI protein. Increase Ci is a Alice of the english which cell profule in a SI protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                are characterised by lowered rates of milesis. The Ci and its binding element (sequence AAXMIAR) can be used to increase expression of a quereliber in vitte, such as in a cell culture, or in vivo. The products can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       also be used for the diadnosis, produceds and predicting susceptibility to reoplasia.

Novel requirement protein, useral to diagnose and treat ceil proliferation disorders, including cancer WPI: Zudo life524/ld. N-PSDR: AAZZOGOS.

Main 20: Fid & Sapp: Em lish.

The present sepence is a homan HF15/ZhAFH1150 protein. Which is required for a homan cell to enter mitosis. In particular,

990S-0135629

Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay, genetic mapping, gene expression earrol; promoter; crefs07hTAFILI50 is an essential cotactor for TFILD-Appendent transcription. CIF130 negatively regulates CIF150 thereby inhibition mitosis or cell cycle progression. CIF150 has a CIF130-binding domain and is used to screen compounds that interfere with the binding of CIF130. CIF130 is used to diagnose and treat proliferative disorders including hyperplasias, neoplasias and dyspiasias. 3458 14.10. fransgenic plants in which flowering is suppressed by a tissue specific eytotoxic gene product, useful for the production of wood for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents the Arabidopsis anamous-like (Adl.) 2 protein. The AGL2 promoter is used to produce transactic plants of the invention, which are characterized by suppressed theorem. The plants are transformed with a construct comparising a float lorgan selective regulatory element (e.g. AGL2 premeter), specializely linked to a mortectified sequence encoding a cytotoxic generatively linked to a mortectified sequence encoding a cytotoxic generatively linked to a mortectified by the progeny). The plants may be stown for either benean consumption of to use as a raw material in industry. When there are prefixed process consumes 20 38 of the energy of a typical plant, it is advantageous to suppress flowering in order to improve wood and lumber yields, suppression of flowering may be desired to eliminate the production, of allergic public, or to prevent police discumination.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FOUR POYMULE EMPRESSION TO BE CONTINUED TO SERVICE TO THE TRANSPORTED 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Neissoria meningitidis: Neissoria abuerrhodae: antiden: Varcine:
treatment; Neissoria infection: meninditis; septicaemia; gonorthea.

DNA sequence encoding BARD1, B123, BE14, BE31 or BE445 - which as breast cancer antigen, BRCA1, binding proteins are useful to identify patient having or at risk of developing cancer

71s/14/sure, Park 287/288, 348pp, English.

preparation of the recombinant breast cancer antigen, BRCAL binding proteins BARL, BRIS, BRES HILL BRIST or a composition for the detection of a HARDL BISS, BES, HILL BEST or BRIST, or a composition for the sequence, specifically a wild type BARCL composition for the detection or purification of BRCAL, useful to identify a patient having, or at antisk of developing cancer. BARLL can be used in the preparation of an antisk of antibody, and in the detection and purification of an protein. BARCL HILL BRIST or BRA45 can used in the identification of a binding protein agonist or antagonist that alters the binding of BARD1, B123, BE2, BE34, BE31 or BE445 to BE741 or the biological activity of the BE741 BARD1, B123, BE2, BE34 or BE445 complex. The antibodies can be used to detect BARD1, B123, BE2, BE14, BE31 or BE445, a specific anti-BARD1 antibody can be used to identify The sequence is that of a protein which can be used in the a patient having or at risk of developing cancer.

Nevel isolated medicional to enepoising suppressed encoding proptides useful for treating or diagnosing e.g. cancer -

Claim 11; Page 1631-1632; 2352pp; English.

definition of the control of the con harmerial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44248 impresent sequences used in the coemplification of disorders, allergic reactions, graft versus host disease and organ rejection, modulate themselytic artivity modulate inflammation, cancers, cardiovascular disorders, neurological disease and AAC77607 to AAC78448 encode the human cancer associated proteins given in AAR43398 to AAB44239. The proteins can have activities based on the the present inconfirming larned to teat immine disorders by reflea or inhibiting the proliferation, differentiation or mobilisation of immine cells, to treat disorders of basematopoletic cells, autolmmune tissues and cells the genes are expressed in. Example of activities include: expostation, proliferative: vulnerary, immunomodulator; antidiabetic; antiasthmatic; antirheumatic; antiarthritic; the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    [492] SVERML, VENVETBESP, LEGEREP PUTPIN, LEGERARI                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-07 LSEVIEPPIEFKLEDWAK 1924
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 23.1%                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amino acid
